Potential competing interests: No potential competing interests to declare.

The article on Unlocking Natural Capital in the Megadiverse Colombian Pacific Basin: Navigating Challenges and Governance Gaps underpins two important dimensions. First hinges on scientific strategic aspects of natural capital that is ecosystem based. Second, articulates natural capital in the Colombian Pacific Basin, is under threat as a result of inadequate technical competence necessary to establish linkages between human and natural ecosystems in a sustainable use, consumption, management, restoration, protection and conservation. These two constraints influence the approach to navigate challenges and governance gaps within the Colombian Pacific Basin that the article should at the very least articulate upfront and in the conclusion part. In this regard, the article should separate with clarity the conclusions from recommendations that are general and specific in nature to inform the scientific discourse, policy and decision makers for appropriate course of action and implementation plans.
