# Review of: "Adoption of Technology Acceptance and Interfaces for Academic Information System Applications"

Supparang Ruangvanich[1]

1 Chandrakasem Rajabhat University

Research that has been conducted for more than half a century has led to the development of a large number of adoption theories and models of technology acceptance, as well as a multitude of extensions and modifications to these models and theories. Established theories and models have been widely utilized to facilitate the evaluation of a wide range of information and communication technology (ICT) products and services. These products and services include a wide variety of technologies, systems, environments, tools, applications, services, and devices. The purpose of this evaluation is to test the applicability of these theories and models and to enhance their predictive validity. In a broad sense, the term technology adoption refers to the process of accepting, incorporating, and embracing new forms of technology.

The following are the recommendations that have been made:

1. The title of the article is suitable for this particular instance.
2. All is well with the abstract of the article.
3. Each of the sections and the overall structure of the manuscript is organized in a manner that is well-suited.
4. The manuscript fulfills all of the requirements for scientific accuracy.
5. An appropriate level of English is used in the writing of the article, making it suitable for dissemination in academic environments.
6. Despite the fact that there are a few references that are not from the past five years, the references that are mentioned are adequate and recent.
