Potential competing interests: No potential competing interests to declare.

The article, 'In-Vitro antibacterial activity of some Ganoderma species: A Review,' describes the findings of preclinical (in vitro) and clinical studies on the antibacterial and antifungal properties of Ganoderma species, demonstrating that many Ganoderma species have antimicrobial properties and can be used in addition to standard medical treatment. Some minor flaws must be addressed.

- 1. The Abstract is deemed weak and non-informative.
- 2. Absence of a clear introduction (related to the issue) and research objectives.
- 3. The author can change the side heading of "Antimicrobial Activity of *Ganoderma* Species against Gram-positive and Gram-negative Bacteria to antibacterial activity as it explains only the bacterial assay.
- 4. The article requires corrections of spelling, grammatical errors, and the clarification of unexplained abbreviations.
- 5. The review manuscript must be arranged according to the respective journal format before final publication.
