Tetanus Peptide Melanoma Vaccine

National Cancer Institute

Source

National Cancer Institute. *Tetanus Peptide Melanoma Vaccine*. NCI Thesaurus. Code C2468.

A vaccine consisting of peptides derived from melanoma-associated antigens and a modified T-cell epitope derived from tetanus toxoid. Vaccination with this agent may stimulate a host cytotoxic and helper T-cell response against tumor cells expressing melanoma-associated antigens, resulting in decreased tumor growth. (NCI04)
