Papillary Urothelial Hyperplasia

National Cancer Institute

Source

National Cancer Institute. *Papillary Urothelial Hyperplasia*. NCI Thesaurus. Code C27879.

A type of hyperplasia that is characterized by variable thickening of the urinary tract epithelium and a slight papillary growth. The latter is not associated with the presence of fibrovascular cores. There is no evidence of atypia. The relationship between this lesion and papillary urothelial neoplasia is not clear. -- 2003
