Potential competing interests: No potential competing interests to declare.

I would like to congratulate the authors for this interesting subject. However, there are some points that should be taken into account. Such as:

1. The title: In the title it would be appreciated if there was the context or country Ghana, because not everyone knows the two universities that appear. In the keywords it would also be desirable.
2. Because it is an analysis to compare to systems of teaching and learning it would be clarifying to include some tables and diagrams with data and results
3. It would be interesting to know the methodology and how data are obtained.
4. About literature review the epigraphs 2.2 and 2. Could be only one, because 2.2 it is too broad a subject to be dealt with in such a summarize epigraphs.
5. By other hand there are some unnecessary repetitions throughout the paper, and it would be desirable to summarize
6. Photos are very welcome to understand the subject and context.
7. Conclusions are interesting however it would be useful to emphasize these two models of teaching in both schools and to include a summarized prospective of future.
