Isolated biliary atresia

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Isolated biliary atresia. ORPHA:30391*

Biliary atresia is a rare, progressive obliterative cholangiopathy of the extrahepatic bile ducts, occurring in the embryonic/ perinatal period, leading to severe and persistent jaundice and acholic stool with an unfavorable course in the absence of treatment.
