**Potential competing interests:** No potential competing interests to declare.

This is a poor, inadequate paper with unclear Aims and Objectives.

My suggestions for improvement are:

- Be very clear about what the Aims and Objectives of the work are.
- Undertake a more extensive Literature Review that is not so limited and repetitive.
- Clarify the choice of case study building and why it is representative of the general building stock.
- Record illuminance from daylighting throughout the day and the season to account for the changing nature of daylight.
- Correctly record the measurement strategy undertaken.
- Choose a recognised referencing system (Harvard, Vancouver) and apply it consistently.
