Thank you for the opportunity to review the manuscript. I appreciate the efforts of the authors in presenting their work; however, I have some concerns regarding the characterization of the synthesized compounds. It would be beneficial to include more detailed information on elemental analysis, FTIR and HRMS, as this would strengthen the validity of the findings. I recommend considering additional experiments or providing more comprehensive data to support the claims made in the paper. With these improvements, I believe the manuscript could be suitable for publication in the journal. I encourage the authors to carefully address these concerns and consider resubmitting the revised manuscript.
