Potential competing interests: No potential competing interests to declare.

The study is very important and relevant to knowledge. it contains so much good information. However, the following observations were made; 1. There were so many irrelevant information in the literature review. The authors should condense the reviewed works in line with title. 2. The study was presented like a lecture material. Authors are expected to organise the presentation in a research format. 3. The authors did not indicate how the hypotheses were tested. 4. The methodology was not robust. 5. Findings were not clearly defined as they were hidden in the unnecessary details.

In all, the study is good and can be made strong by a thorough modification
