

# Review of: "Impact of medical, surgical and expectant management on spontaneous miscarriage/abortion on first trimester: A systematic review and meta-analysis of randomized, controlled trials"

Meltem Mecdi Kaydirak

Potential competing interests: No potential competing interests to declare.

Women frequently experience pregnancy loss in first trimester. For this reason, I think that analyzing your expectations at an advanced level leads to important results. For example pain control, bleeding... etc. however, the meta-analysis focused on physical symptoms and risks. Psychological and social needs could also be addressed in detail.
