Potential competing interests: No potential competing interests to declare.

It is an interesting article that truly requires attention from all stakeholders, as motivation among students has been declining. However, I would like to point out a few things:

Introduction: It is important to explain the research problem, objectives, and significance of the study in the introduction.

Literature: Address the gap in the literature.

Method: More details are needed in this section, especially concerning sample size and selection criteria (inclusion and exclusion criteria).

Suggestions:

1. Include a conceptual framework.
2. Employ mixed methods research for robust findings.
3. Provide the hypotheses of this study.
4. Discuss the limitations of this study and provide recommendations for future research.
5. Clearly indicate the contributions of the study.
