Potential competing interests: No potential competing interests to declare.

I suggest to indicate the period the study was done. Because there are some previously studies carried out in 2013 and 2011, but authors did not include these references in the present work. I suggest including these references:

Transfus Clin Biol. 2016 May;23(2):72-7. doi: 10.1016/j.traccli.2015.11.00

Int J Infect Dis. 2013 Oct;17(10):e832-7. doi: 10.1016/j.ijid.2012.12.007

In discussion section

It is important to discuss your data with previously reported paper in the context of sensibility and specificity of the test used. In the paragraph where authors state that prevalence has dropped compared to those obtained by Tayou Tagny *et al.* in 2009, due to the implementation of WHO recommendations. I suggest discussing data in the context of serological test used.
