

# Review of: "Causality in Machine Learning: Innovating Model Generalization through Inference of Causal Relationships from Observational Data"

Ebrahim Khalili

Potential competing interests: No potential competing interests to declare.

- 1- The description of the issue is not well stated. In such a way that the challenges that are supposed to be covered by this research are not mentioned.
- 2- Abbreviations are not expressed in full or with subtitles.
- 3- The proposed model of the research is not well explained and no flowchart, algorithm or pseudo-code is considered for it.
- 4- The experimental results are not clearly and technically stated.
