Ectomesenchymal Chondromyxoid Tumor

National Cancer Institute

Source

National Cancer Institute. *Ectomesenchymal Chondromyxoid Tumor*. NCI Thesaurus. Code C121785.

A rare, well circumscribed, non-encapsulated tumor that arises in the oral cavity, most often the anterior tongue. It is characterized by the presence of round to spindle cells in a chondromyxoid or hyalinized stroma. Recurrences have been observed in a minority of patients.
