I have now had the opportunity to examine your manuscript entitled "Knowledge of Risk Associated with Exposure to Per- and Polyfluoroalkyl Substances in Abuja, Nigeria". First of all, the current manuscript is not ready for publication. The authors need to revise the entire sections, and the conclusion section is missing.

The detailed comments are as stated below:

- 1) Please avoid using citations more than 5 years old (> 2019); this is to ensure the information in the manuscript is up to date.
- 2) The authors need to mention in the introduction the exact concentrations of PFOA and PFOS in the environment (unit ng/L). This literature is important to show the abundance of PFAS compounds.
- 3) Need to rephrase the objective, which is at the final paragraph of the introduction.
- 4) I believe the word "we" is not suitable to be used in this type of publication.
- 5) This paper requires extensive language and formatting improvements.
