Potential competing interests: No potential competing interests to declare.

It is a preliminary study. The units should be correctly expressed, and Figure 3 is missing. If the authors would like to improve their manuscript, please consider the following:

1. Both nmol and  $\mu$ mol are one word without any space. This has to be corrected in figures and tables.
2. MDA and reduced glutathione levels were expressed per g or mg of tissue. It is better to be expressed per mg of protein rather than mg or g of tissue.
3. The unit of MDA level is expressed per hour. This is wrong, as it is not an enzyme.
4. The protein level in the liver in Figure 5 is expressed per ml. This is wrong, and it is not blood plasma or serum. Please express it per g of liver tissue.
5. A confirmation of the results is required to measure more parameters.
