Potential competing interests: No potential competing interests to declare.

- In the abstract section, it is stated that "to increase reliability, a new design with 56 ports with uniform and non-uniform combinations of ports is proposed." What was the reason for choosing 56 ports, and what is the basis for its selection?
- The presented article lacks equations, sections related to calculations, and even the objective function. It is not clear what equations the authors will use or with what goals they will do their work.
- The article lacks simulation and a simulation method.
- The article lacks tables and images related to the results.
- It is not clear that the numbers and results obtained in section 5 are based on what calculations and studies and in the form of what software or even with what method?!
- The results presented in section 6 have not been realized in this paper. In fact, these cases have not been investigated at all to be realized.
