The article is a good attempt to enumerate the process of establishing a cancer unit at a tertiary care hospital in Tanzania. However, the following comments to further improve are:

1. Abstract is very short and unstructured. Expand it to at least 300 words with headings: Background, Methods, Results, and Conclusion.
2. In the Methods section, mention briefly the COM-B framework, its applicability in your setting, and its merits and demerits.
3. Fig. 2 doesn't convey fully the hands-on training model. Make it more illustrative.
4. In Fig. 3, instead of using the words "cancer incidence," use "proportion of cancers" as this is hospital-based data.
5. The number of references is very few. Please add a few more references from other LMICs.
