Spindle cell hemangioma

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Spindle cell hemangioma. ORPHA:210584

Spindle cell hemangioma (SCH), also known as spindle cell hemangioendothelioma, is a rare benign vascular tumor either solitary or multiple, characterized by cavernous blood vessels separated by spindle cells reminiscent of those in Kaposi sarcoma and located in the dermis and subcutis.
