Betamethasone Sodium Phosphate

National Cancer Institute

Source

National Cancer Institute. *Betamethasone Sodium Phosphate*. NCI Thesaurus. Code C47964.

The disodium salt of the 21-phosphate ester of betamethasone, a synthetic glucocorticoid with metabolic, immunosuppressive and anti-inflammatory actions. Betamethasone sodium phosphate binds to specific intracellular glucocorticoid receptors and subsequently binds to DNA to modify gene expression. The synthesis of certain anti-inflammatory proteins is induced while the synthesis of certain inflammatory mediators is inhibited. As a result, there is an overall reduction in chronic inflammation and autoimmune reactions.
