Review of: "Flood Prediction by using Artificial Neural Network: A Case Study in Temerloh, Pahang"

Evren Turhan[1]

1 Adana Science and Technology University, Turkey

It is seen that the authors have almost never made the corrections I mentioned in the previous revision. It is necessary to compare the results they obtained with similar studies and to include discussion sentences. Moreover, it is difficult to reach definitive results with a single regional research study. It is important to conduct a more detailed study. Therefore, my decision regarding this study is negative. Major revisions are required for the article to be published in this journal.

Best regards and yours sincerely,
