Potential competing interests: No potential competing interests to declare.

The article entitled "Quaternion Quantum Mechanics: Unravelling the Mysteries of Gravity and Quantum Mechanics within the Planck-Kleinert Crystal," is well-written; however, I would like to draw your attention to the following observations:

- 1- Add additional references and citations to the introduction article.
- 2- At the beginning of the introduction article, write a brief summary of quantum mechanics.
- 3- In the conclusion, add an additional paragraph regarding some future work relating to the development of the completed article.

I suggest publishing the article.
