Potential competing interests: No potential competing interests to declare.

The title is not coherent with the manuscript.

The abstract should try to inform relevant things that are mentioned in the manuscript. The authors should improve it.

Even when the manuscript shows interesting information about wastewater and its treatments, there is no discussion or predictions. It is just a description and a report.

The format of section 3.1 should be corrected.

It is recommended some tables which compare the advantages and disadvantages of wastewater treatments.

Section enumeration is not correct (3.1 Industrial Wastewater treatment - 3.1.3 coagulation – 3.2 Moringa Stenopetala)

Why do you mention just Industrial Wastewater treatment?

You avoid the cost of the treatments.

Authors should try to improve the number of references, avoiding using the same ones.

Future perspectives and recommendations for other authors should be included.

Conclusions should be improved. Authors should add relevant information on wastewater treatments, as for example the best alternatives considering each kind of sewage.
