**Potential competing interests:** No potential competing interests to declare.

This paper provides abundant evidence to show the spillover effect of productivity in regional economic growth, and shows scenarios in different sectors and industries. The experiments and data evidence are robust in revealing the effect. However, the paper is missing in the part of mechanism discussion, especially what contributes the different spillover effect. This paper briefly mentions about difference in labor cost in different regions, but more data evidence and deep analysis about the root cause could contribute more to the policy implication of this paper.
