Potential competing interests: No potential competing interests to declare.

An interesting perusal of the scientific research career of the erudite Ugo Carraro from his graduation as a doctor to his becoming an iconic figure - senior scientist, professor, pioneer, mentor, motivator, organizer, doer and more. The authors have presented in detail his interests, the research he conducted in the years of combating degenerated muscles, the implementation of systems, validation of methods, work on various projects with international collectives. The Current Scientific Contributions section presents Hugo Carraro's vast contributions to the scientific community through the European Journal of Translational Myology (EJTM) and annual conference Padua Days of Muscle and Mobility Medicine (PDM3), which offer innovative and significant topics, but I would recommend that the authors expand the section to highlight his practical contributions to the field of rehabilitation and healthcare.
