Potential competing interests: No potential competing interests to declare.

1. Abstract is very lengthy and vague. No need for background information in the abstract.
2. Preparation of the specimens section needs to be explained more for readers' clarity.
3. All the equations are to be cited properly.
4. Figs. 2, 4, and 5 are not required. This can be explained through text.
5. Include error values in all line and bar graphs.
6. Include standard deviation for all the findings in the discussion.
7. Only results of mechanical testing will not fulfill the scope of this research.
