**Potential competing interests:** No potential competing interests to declare.

Overall, the paper is good, and the idea was really significant. Although the article can be made better so that readers would find it beneficial, there are certain adjustments that need to be made, as well as the addition of some data and the recommendations listed below. Please also make some improvements to the title, as I believe it could be a little more descriptive.

1. Abstract: It seems incomplete with less information regarding your proposed objective, so it can be improved.
2. Introduction: The paragraph should be rearranged to maintain a flow. Also, needs to add a paragraph that mentions the objective, hypothesis, or research question for this review.
3. Please define the abbreviations in the first place.
4. Bromide Source: Could be more precise for detailed and more targeted information.
5. Methods: This section has a wide scope for improvement as it should have details regarding the conduct of the literature survey and its interpretation.
6. Discussion: repetition of information, ambiguity in statements. Some grammatical errors are also making it difficult to understand the exact meaning of sentences.
7. There should be some data in order to support the present hypothesis.
8. Conclusion: can be elaborated by the inclusion of some supportive quantitative data, implications, and future aspects.
