## Comments to the Authors:

Referring to the article entitled "Relationship between In Vitro Physical Properties and In Situ Biofilm Formation of Fissure Sealants,"

Although the idea of the article is interesting, some considerations should be made. My suggestions are listed below:

The abstract should contain subtitles: objectives, materials and methods, results, and conclusion.

It would make the article more interesting with updated references throughout.

Some grammatical errors were found in the manuscript.

Captions of tables and figures should be more detailed and complete.

In the Materials and Methods section, the authors should make it clearer and mention the hydroxyapatite paste preparation procedure.

The sample size calculation was not presented in the article. I suggest the authors add this information.
