Potential competing interests: No potential competing interests to declare.

It is an interesting topic to review, the author did a good job of researching the information, it would be important to summarize the topics more to make it more understandable to readers.

some suggestions

Abstract:

better use abbreviations, for example: (MeV)

Measles is a disease, not a virus.

I suggest purifying the information more because it includes data that should not be included in a scientific summary.

Introduction: I think I should summarize the information more.

Figures 1, 2,3,4: are they your own figures? If not, I suggest including the bibliographical citation.

Reference 7 and 8 are the same
