Potential competing interests: No potential competing interests to declare.

Thank you for your effort in this work.

1. The gelling of PRP needs references as there are other protocols to be obtained.
2. The surgical protocol also includes the use of hyaluronic acid (Gengigel) and the use of antibiotics. Is there are any benefits of PRP in this case or was it a coincidence of normal healing with adjunct use of antibiotics.
3. What type of bisphosphonate drugs the patients were receiving.
4. How did the author obtain the fibrin membrane.
5. Not mentioning the limitations of the technique in the discussion section.
6. Check the numbers of the figures.
7. No figures for the BRONJ defects.
8. No radiographic photos of pre-post treatment.
9. It was not mentioned that any bone graft was used in this study so why figure 15.
