Thank you for this opportunity to review this paper. It seems very interesting. I have some suggestions as follows:

Introduction:

Please briefly explain some real word applications on integrating Chat GPT in various contexts such as education, healthcare and hospitality etc. (also how is it different from normal or traditional manual work or applications without integrating)

There are large number of instances within the paper which is incomplete and not specifying the findings of the previous studies. For example, some recent studies were neglected in the literature review itself and most of the industry related perspectives have been presented.

For example: "Other than the interior mechanism of OpenAI's GPT that has attracted many studies on the generative capabilities of LLMs (there are some open-source replica of it), the information path from users to the GPT needs attention as well. For example, in the case of labor market study mentioned above where the jobs that are statistically deemed to be replaced by ChatGPT are mostly repeated and quantifiable works, the model has strengthened the importance of communication towards the GPT model from users. "

Please clarify the research question/s. Kindly show the readers, how you formed your research questions. For example, the study objective, gaps, and importance of the study

There are a few typos so it might be useful to review the paper to address those by a professional proofreader.

Thank you very much and wish you all the best
