Review of: "Using the Altman Z-Score Model to Forecast the Financial Distress of a Subset of NIFTY 50 Companies in the Indian Stock Market"

Ammara Yasmin[1]

1 National University of Modern Languages

As a beginner to learn to write a paper, it is a good effort for undergraduate level. However, this paper is not appropriate to be published in a peer reviewed journal. A research article tries to answer a question and provide some significant contribution. This paper just discusses the calculation of Altman Z score and categorize firms on the basis of this ratio. There is only one variable in this paper. It is suggested that the author should explore the existing research article related to the financial distress. Then, identify some research problem related to it. Then make a clear research question. Also, identify other variables required to answer that research question. Apply appropriate research methodology and interpret the results accordingly.
