

Review of: "Digital Literacy in People with Disabilities: An Overview and Narrative Review"

Romell Ramos¹

¹ University of Batangas

Potential competing interests: No potential competing interests to declare.

Positive Findings: The research problem is novel and relevant.

Areas for Improvement:

1. For the abstract, focus on the significant findings of the study and any new discoveries.
2. You may include/integrate the different digital competencies framework in your theoretical underpinnings. Highlight the gaps by relating these existing frameworks to the peculiar needs of persons with disability.
3. The "Objectives" does not present the research objectives but the gap you have identified. Better to give specific research objectives such as "determine constructs or dimensions of digital competence for persons with disability" or "identify the barriers and challenges among persons with disability in developing their digital competencies"
4. Regarding your methodology, you have to set specific criteria for identifying the articles selected. It would be useful to highlight the procedures of a descriptive meta-analysis.
5. For the discussion of the findings, better if the phrase "several studies" be revised.
6. For References, include the digital object identifier
