This is an interesting approach to the subject. Here are some remarks how to improve the paper:

1. COVID-19 evolved in the years 2019-2022 and each epidemic wave should be (briefly) summarized separately (there were different symptoms, severity, mortality, etc).
2. I would expect a table comparing the three infectious agents mentioned in the title and the diseases they cause.
3. Check the text with the google dictionary - minor grammatical and spelling errors give the impression of haste and chaos, and this does not favor positive reviews.
