Review of: "Intelligence: The Quest for a Universal Assessment Framework"

Kadir Uludağ¹

1. Shanghai Mental Health Center, Shanghai, China

Thank you very much for the work Intelligence: The Quest for a Universal Assessment Framework. I find it very interesting.

1-) If possible, you can mention the methods in the abstract of your work.

2-) You can mention the time of reference 2 and reference 3. You may also mention earlier work to quantify intelligence.

3-) You can interpret it further and also explain how many people were included in this study.

Torrance developed a creativity test, basing it on Guilford's works. Today, LLMs overperform humans in the Torrance Test.

4-) Be sure that the references are necessary, or you can explain why it's speculative considering the references.

The last option, naturally, remains quite speculative 10 11.

5-) You can also discuss intelligence based on evolutionary theories.

6-) References should support it; otherwise, I think it's better to remove it.

Human brain size is positively correlated with intelligence.

7-) You can also mention animal tests which are used to measure animal cognition.

8-) You can also suggest how further studies should measure intelligence.

9-) You can add more content to the discussion section.

10-) You can improve the organization of the paper.
