**The topic is interesting but there are several aspects that should be further addressed and explained. Some observations are given below.**

The abstract seems to contain too much background information from the existing work which is not much suitable for an abstract. It's much better to use one or two sentences to summarize the research background and directly go into your own work findings. Major findings of this study are not highlighted in the abstract section.

The format of the manuscript looks more like a research report, not a typical journal paper. So the authors should make substantial revision.

The methods used in the work should be promptly described, and its innovation and motivation of the work should be concentrated and emphasized. Please review the methodology and describe it better. Something remains unclear in the procedure adopted. Improve the figure quality.

The title is too long, and it is suggested to highlight the main innovation and the method used in the work, not just a case study.
