Carcinoembryonic Antigen Peptide 1-6D Virus-Like Replicon Particles Vaccine

National Cancer Institute

Source

National Cancer Institute. *Carcinoembryonic Antigen Peptide 1-6D Virus-Like Replicon Particles Vaccine*. NCI Thesaurus. Code C70644.

A cancer vaccine, consisting of alphavirus vector-derived virus-like replicon particles expressing the 9-amino-acid carcinoembryonic antigen peptide (CAP) 1-6D, with potential antineoplastic activity. Vaccination with this agent may elicit a cytotoxic T lymphocyte (CTL) immune response against CEA-expressing tumor cells.
