The manuscript entitled "Sero-prevalence of Viral Hepatitis B and C infection and associated factors among Pregnant Women in Southeast Ethiopia: Community-based crossectional study" is well presented. In this study, the authors have attempted to provide a general overview on the epidemiology of HBV and HCV infection among Pregnant Women in Southeast Ethiopia, including the prevalence and risk factors. Overall, it is a valuable study. Since this study highlights the burden of HBV and HCV in Southeast Ethiopia and gives clue to health policy makers to control the burden of HBV and HCV infection.
