

Review of: "Investigation of Mechanical Properties of Sisal Fiber and Sugar Palm Fiber Reinforced Hybrid Composites"

Arunkumar Gopu

Potential competing interests: No potential competing interests to declare.

1. The findings given in the abstract and conclusion are expectable facts. You can give quantitative results that may be comparable with other composites.
2. The novelty of the work with respect to the state of the art and the expected/obtained results is not very clear. Authors must write a separate paragraph at the end of the introduction section. Moreover, they can add a paragraph related to the use of fillers in line with this work.
3. The author includes recent references (2020-2022) for better understanding for beginners.
4. Significant improvements are needed in the conclusion section. A conclusion must answer your problem statements as well as be supported by the data gathered, followed by a concise take-home message.
5. Detailed explanation is needed for the results and discussion section.
6. What is the reason for selecting the process parameters within the range?
7. The author includes a mean and standard deviation plot.
8. Compare these paper findings with recent state-of-the-art and explain the benefits of your materials.
