Abstract:

1. Mention the study duration and study setting.
2. Mention the character of the study participants.

Manuscript:

3. Mention the gaps monitored by the researcher in the previous studies.
4. Mention the study design, study duration, and study setting.
5. Include the ethical approval and clinical trial registration number.
6. Include the diagnostic criteria for the disease and its ICD classification.
7. Mention who diagnosed the participants and their qualifications and experience.
8. Mention the outcome variables with their reliability and validity.
9. Include the real figures for the intervention program for study replication.
10. Include the sample size calculation with a suitable reference.
11. The statistical tests included are not apt for this study.
12. Mention how the covariables are controlled and how the homogeneity is measured.
13. Mention the treatment compliance rate, dropout rate, and adverse effects.
14. Present the reports with 95% CI with upper and lower limits for all outcome variables.
15. Include the MCID score and effect size of all the variables.
16. Include the mechanism behind the changes in the outcome variables with these intervention modalities in these patients.
17. Include the future recommendations of the study.
