Review of: "“Hospital's Thermo-neutral Zone for Patient Safety and Climate Change Sustainability"

Tatsuhiro Yamamoto

Potential competing interests: No potential competing interests to declare.

- The overall concept of the paper is unclear.

- It is recommended to show the prediction algorithm in pseudo-code.

- A conceptual diagram of the overall structure of the study would enhance understanding.

- Figure 1 does not show the dimensions. Please correct it.

- Table 2 has some problems, such as no description of units. The number of significant digits should also be addressed.

- Figure 3 has a coefficient of determination of 0.86. But I think it should be shown with a coefficient of determination adjusted for degrees of freedom.

- Figure 3 does not look linear. Please logically show the outliers.

- Figure 4 has a low resolution. In addition, there is a need for more work to be done on the readability of the figure.

- Figure 6 shows a lack of understanding of the units on the horizontal axis. In general, such notation is undesirable. Please re-design so that the Time and Date can be understood.

- What kind of measuring instrument is utilized in Fig. 6? Please also state the possible error range of the instrument.
