Potential competing interests: No potential competing interests to declare.

This is a good area to study, indeed!

However, as a research article, if the authors could provide the following information about the study, it would be more impactful.

1. What is the gap of study?
2. What is the background of study and what does the literature say about this study (need to write them clearly).
3. Methodology of the study: the authors has mentioned that "this study took place in the United Arabs Emirates (UAE) with a cohort of nursing students at the end of their mental health clinical placement". who are the studied participants? Are they year 2, 3 or year 4? undergraduate nursing students? diploma students? What is the sample size? What is the instrument used in this study? How is the data collected?
4. What are the findings from this study?
5. What are the discussions based on the findings?
6. What are the recommendations for future from this study?
