

# Review of: "Population estimates of biomarkers of exposure to carbon monoxide, nicotine, and NNK in smokers and non-smokers"

shaimaa mostafa

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The paper is well written and the topic is very important but there are some points to be addressed

1- the introduction is very long with old references. 2- too much use of abbreviations , so list of all abbreviations should be available

3- the conclusion should be more concise

4- are these markers available for all types of smoking ( cigarette and Goza smoking)

5-cost benefit of these markers is not well discussed
