

# Review of: "[Short Communication] Individual opinions on the excessive and under diagnosis and treatment of thyroid cancer"

Dr Sushma Kulkarni

Potential competing interests: No potential competing interests to declare.

Thyroid cancer diagnosis has always been a topic of discussion . The author has come up with the effects of overdiagnosis and underdiagnosis in the article. The write up on overdiagnosis emphasises on introduction of borderline categories. A more elaboration on difficulty in categorizing papillary and follicular variants histologically would describe the problem in diagnosing. The write up on under diagnosis sites only one example which is very rare entity. Overall, this write up may also include the need for definitive IHC markers to differentiate between benign and malignant lesions of thyroid.
