Potential competing interests: No potential competing interests to declare.

The idea of the research is good by forming a hybrid model for snake classification with snake description from two different sets of algorithms, but the authors should be attentive to the following:

1. The article should be focused on the problem which will be solved in the introduction section.

2. The article lacks a literature review, please add it.

3. Is it simple to classify the snake face if the image of the snake face is unclear? And which kind of image is suitable for classification?

4. This article needs more references, as their number does not exceed 7 references.

5. The article needs to improve the language due to there are linguistic errors.
