Potential competing interests: No potential competing interests to declare.

1. The concept of "quality of jobs" has to be defined in the context of the Abstract of this research paper. Further any claim of "people who have stopped being employees to becoming entrepreneurs" needs to be backed by appropriate literature review.
2. In the Introduction stage it is "The study of entrepreneurship is relatively new". This might not be logically true, unless the context is defined properly.
3. The author has used the words "In this way" "in this context" in a couple of places. Better synonym should be used as it does not sound like a research language.
4. Literature review should include more current and latest research papers
5. Appropriate justification for choosing the period 2001-2016 should be given
