Potential competing interests: No potential competing interests to declare.

Background:

There is no specific explanation of why this study is conducted. Why is the correlation between HbA1c and lipid profile important? If people want to screen for diabetes, is checking HbA1c or blood glucose enough, considering that blood glucose is relatively more low cost than a lipid profile?

Method:

Please add the ethical clearance number.

Results:

The results are not synchronous between the p-value and the r-value. What statistical program did the authors use?

Please provide the raw statistical data.

HbA1c in Table 3 is confusing.
