The study was done very well. The authors focused on anti-inflammatory effect of oral Tocovid and collected a lot of research data including the follow-up on the clinical trial. Our team also made similar investigation on recurrent AF after RF [Basic Res Cardiol, 2019; 114(3):14.] and done multiple study on inflammatory response after cardiac surgery on CPB. We suggested the authors select some inflammatory cytokines to explain the effect such as hr-CRP, NLR [Chin Med J, 2019 132(12): 1414-1419.]; [J Invest Surg. 2021 Sep;34(9):1000-1006.]; [BMC Health Serv Res. 2022 Apr 13;22(1):494.].
