CCDC6/PDGFRB Fusion Gene

National Cancer Institute

Source

National Cancer Institute. *CCDC6/PDGFRB Fusion Gene*. NCI Thesaurus. Code C99514.

A fusion gene that results from a chromosomal translocation t(5;10)(q33;q21) which fuses the 5' part of the CCDC6 gene with the 3' part of the PDGFRB gene. This gene fusion is associated with chronic myelomonocytic leukemia.
